

# Year 1 Computing – Introduction to Animation

## What I should already know

- To know how to follow simple instructions.
- To put pictorial instructions into sequential order.

### The Basics of Scratch Jr.

-**What is Scratch Jr?** Scratch is a website/ app that lets us code our own stories, games and animations.  
 -**Sprites:** Scratch Jr. uses characters called sprites. The main sprite is a cat called Scratch.  
 -**Home:** Clicking on the house takes you 'home' to your project screen.

#### Getting Started

-The + starts a new project.

-These are programming blocks. We drag them into the programming area (right). Clicking the block in the area makes the sprite perform on the stage.

- **Moving Blocks:** These make the Sprite move in different ways.

-**Background:** Backgrounds are added by clicking this icon (right).

-**Start Blocks:** Start blocks are yellow. These are used to start/ run programs.

-**End Blocks:** End blocks are red. These show what happens at the end of your program.

### Algorithms and Programming

-An **algorithm** is a set of instructions for performing a task. Designing an algorithm can help us to make the sprite do the things that we want it to do.

-**Programming** is when we move the blocks into the position (based on our algorithm design). Our programming codes the sprite to perform the actions.

### Debugging

-Sometimes, things don't work exactly how we want them to the first time. This may be a problem with our algorithm, or we could have made a mistake in our programming.

-If the animation does not work correctly the first time, remember to **debug** it. This means finding and fixing the problems.

## What I will learn by the end of this unit

- **Programming** is when we make a set of instructions for computers to follow.
- We use **programs** in order to code our own stories and animations. Scratch Jr involves sprites (characters on the screen).
- We use **algorithms** (a set of instructions to perform a task) to program the sprite to do different things.

## Disciplinary Skills

- Understand what algorithms are.
- Understand programs execute by following precise and unambiguous instructions.
- Create and debug simple programs.

### Sequencing

-**Sequences:** -A sequence is a pattern or process in which one thing follows another. In Scratch Jr. we can stack blocks together side by side in order to create programs made up of sequences.

-**Deleting Blocks:** Blocks can be removed from programs by dragging them from the programming area back into the blocks palette.

-**Repeating Blocks:** For something to happen more than once, we can change the number underneath the block.

-Running the Code: Run your animation by tapping the full

## Key Vocabulary

command	sprite	compare	programming area
block	joining	start	block
run	background	delete	reset
predict	effect	change	value
instructions	design
